

## Notifying Fire Marshals at the School of Life and Sciences

### Site overview

**Sector:** Education

**Business:** University

**Site details:** Multiple buildings across the site

### Customer requirements:

- Notify Fire Marshals when the alarm is activated

**Fireco Solution:** DMS

The School of Life Sciences (SLS) is part of Dundee University and has around 700 members of staff from across the world. The award-winning school uses state-of-the-art laboratories, technology and teaching facilities to carry out scientific research.

### Problematic pagers

Before using DMS, the School of Life Sciences were using a pager system to notify Fire Marshals when the fire alarms were activated.

The SLS Safety Team at the School explained, “The main problem we were having was that the pager system only notified people within a certain range.

This created a lack of warning for the Fire Marshals as they weren’t getting enough notice or no notice at all.”

A Fire Marshal is responsible for evacuating people during a fire drill, as well as emergency procedure planning and fire prevention.

**“ all Fire Marshals are now aware of the fire alarm activations in all parts of the complex.**

The SLS Safety Team, Dundee University

”

This means it is vital that they are notified when a fire alarm is going off. “The Fire Marshals could not respond appropriately or quickly to emergency situations or alarm activations”.

## Finding a notification system

The SLS Safety Team started looking into alternative systems that could notify their Fire Marshals more efficiently.

Fireco’s Digital Messaging Service seemed like a good option for the School because it can notify subscribers anywhere in the world, the range is not limited. The unlimited coverage provided by Digital Messaging Service was an important deciding factor for the team.

## Empowering the Fire Marshals

The Fire Marshals at the School of Life Sciences have benefitted from the installation of DMS in their building. The SLS Safety Team are pleased with the product because “all Fire Marshals are now aware of the fire alarm activations in all parts of the complex.”

This means that if a fire were to break out in the building, the Fire Marshals can be reactive and take the appropriate actions to keep the staff, students

and school safe from fire. “We like DMS because it was easy to install and easy to set people up to receive alerts. We would recommend DMS to other academic institutions.”
